

Upgrade to construction software in 7 steps

STEP ONE

DEMONSTRATION

Helping you find the right solution

As with any business investment, your first step to upgrading to a construction specific financial management system must start with an evaluation to find the solution right for you.

1. Tell us what you're looking for

In whichever format works for you, be it a call, email or meeting we can talk through the challenges you face, the improvements you'd like to see, and we'll explain how we can help.

2. We'll demo to your requirements

Next, we'll come and show you our Evolution M system and talk to you about how a construction specific financial system can consolidate your manual processes and provide both your financial and commercial teams' business intelligence beyond the numbers.

3. Your personalised upgrade proposal

From us you'll then receive a proposal summarising your challenges versus our proposed solution, and all the other benefits construction software can bring to your business as discussed during our demonstration.

So your first step is simple, tell us what you're looking for and we'll come and show you what we can offer and how we can make the process of upgrading your accounts system as straightforward as possible.

“ We felt that selecting a system designed specifically for use in the construction sector, supported by a team who understand the industry was of great benefit. ”
