

# STEP FOUR TEAM PREPARATION

Training for  
your team

Once your new Evolution M system is installed, you're ready to start our Upgrade Training Programme, specially designed for businesses moving onto construction specific software for the first time.

## 1. Training that understands construction

Our consultants understand construction exceptionally well and our specially designed training programme is based around our experience of upgrading hundreds of businesses from generic systems onto our construction specific systems.

## 2. Professional user training notes

As part of our Upgrade Training Programme, each user receives training booklets for each day of the training relevant to them, with space to add notes and of course refer back to throughout your upgrade process.

## 3. Reinforcing your skills

We appreciate that there can be a lot to take in when introducing a new financial system. Therefore to help users refresh what they've learnt, we have a number of tools to help reinforce what has been covered in the training notes such as online webinars and our inbuilt help functionality.

“ The Evolution M training notes are comprehensive and professional allowing you to add your own notes and refer back to once the trainer has left which has proved invaluable ”
